Information on experiences with Homeopathic Prophylaxis (HP) with Covid 19 in Cuba, China and India - by Dr. med. Christian Büttner

**New information on the use of homeopathy for the prophylaxis and treatment of
infectious diseases in other countries (as of November 11, 2020), Dr. Christian Büttner.**

**This is expressly not a therapy recommendation! If you have any symptoms
please contact a doctor you trust immediately. I reference here
interesting results from my personal research and my own experience to stimulate and promote
a scientific discussion about experiences with complementary therapy methods. This is urgently
needed in terms of pluralistic medicine.**

What do Cuba, China (Hong Kong and Macau) and India have in common?

In all three countries, homeopathic medicines are successfully used with millions of people for prophylaxis and treatment of infectious diseases such as Covid 19. Most of the information comes from the new, currently running, large homeopathy congress with participants from the around the world and with high-level experts who report on their experiences and results: You can get direct access on Mathias Berner's website: www.unitedtoheal.com .

• **Dr. Isaac Golden, Australia**, reports on **Homeopathic-Prophylaxis (HP)** in Cuba, carried out by the country's Ministry of Health and in which he also contributed in the past years, for strengthening the immune system of the population against various infectious diseases. Cuba has around 11.3 million inhabitants, of which up until April 30, 2020 already 5 million (especially the elderly and at risk) have been treated with HP, and 6.3 million not yet treated. There were 1,472 cases of illness in the untreated group and 65 in the group treated with HP. Overall, both the infection rate as well as the death rate from Covid 19 in Cuba today (130 deaths) are less than 10% of the comparative figures in Germany.

• **Prof. Dr. Aaron To, China** , reports on his experiences with HP, especially in Hong Kong and Macau. Prophylaxis in Hong Kong consisted of alternating doses of Gelsemium 30C and Bryonia 30C (3 globules every Wednesday). 1.68 million Hong Kong Chinese got at least one dose of HP prophylaxis, which is 21.5% of the total population, and 6.12 million received no HP. In a large test series in Hong Kong carried out from 1 to 14 September 2020, of the 1.78 million people tested, only one from the HP group was positive, while 3,783 from the group that did not take HP prophylaxis tested positive (with a comparable number of test participants), says Prof. To. In Macau 48-49% of the population took part in receiving HP prophylaxis (over 300 thousand people). There has been no death from or with Covid 19 in Macau to this day.

• **Dr. Jawahar Shah, India**, who leads a team of 150 therapists, mostly doctors, reports from HP in India. With the support of the state, they have mainly treated police officers, social workers, nurses, doctors, grocery vendors and risk groups. Then in addition also in the largest

slum in Asia, where 250 thousand people live in one square kilometer. In total 100 thousand doses of HP were issued, following which the number of Covid patients reduced to 9 within a month (I don't have any information how many were previously affected). His treatment strategy is: Arsenicum album 30C 3x3 globules daily for three days, then Arsenicum jodatum C6 3x3 globules for three days, then a break until the next month. Then the same thing is repeated the following month.

Overall, I think these are very amazing results that deserve to be discussed broadly on a scientific basis. Could it be possible with such treatments to achieve significantly better results than with any previous flu vaccinations, with almost negligible costs? Instead, tens of billions are being spent around the world looking for new vaccines, the long-term effects of which we can in no way estimate. Could it be that there are certain interests in this regard, which are responsible for the completely one-sided approach? Or have you once already heard a report on the successful Homeopathic Prophylaxis trials in the mass media? In this context, Dr. Golden from Australia points to 16 studies published in 2013 at Harvard University Law School after 5 years of research. The title: "SYMPOSIUM: Institutional Corruption and the Pharmaceutical Industry" (<https://onlinelibrary.wiley.com/toc/1748720x/2013/41/3>) in which it is clearly shown the extent of corruption at all levels in the approval of new medicines. And for the past 7 years it seems in this respect to have not gotten any better – on the contrary.

In conclusion, by popular request, I am adding the summary that I wrote from the end of June 2020: **Study on the effectiveness of homeopathic medicines in Covid 19 patients.** Implementation and presentation of the study: Prof. Dr. Pradeep Kumar, India. Taken from a video on Mathias Berner's website: www.unitedtoheal.com Prof. Pradeep Kumar, part 2.

Prof. Kumar's research was carried out in 5 steps:

- 1.) 100 Covid 19 patients were treated with homeopathic remedies. Results: 98 were at the latest after 2 Weeks healed (March 10th to April 9th, 2020)
- 2.) 116 Covid 19 patients were treated with homeopathic remedies. Results: 99 were healthy at the latest after one week (10.04. To 21.04.)
- 3.) The most common symptoms were asked of 570 Covid 19 patients and BRYONIA was chosen as the main remedy for the people in the Agra region.
- 4.) A placebo-controlled study (approved and monitored by the Indian Health Authority) for adjuvant Treatment of Covid 19 patients with homeopathy was carried out **at an allopathic hospital**. 100 patients were included. 25 patients received Bryonia in addition to the normal measures: all 25 patients were symptom-free after 4 days at the latest, and all 25 had at the latest after one week a negative PCR test! 25 patients who got a placebo had mixed reactions and almost all still tested positive. (05/05 to 19/05/2020)
- 5.) After this, 60,000 people were given Bryonia as a prophylaxis for Covid 19 over the course of a month. Not one of them fell ill with Covid 19 during this month. (May 16 to June 15, 2020)
Another experiment with 200,000 people is to be carried out soon !!

So we can be curious what the world's largest vaccine manufacturer, which produces in India, will think of this! Also it will be exciting to see whether this study will make it to other parts of the world and whether it will be published, read and discussed!!! The cost of Bryonia in India is in the cents range. For comparison: the cost of remdesivir (Virostaticum), which is assumed to shorten the illness time in Covid 19 patients by 1-2 days, without lower mortality rates, is \$2,340 (\$3,120 for private patients) for 5 days of treatment; for longer treatments it is \$4,290 (or 5,720) dollars per patient!

Quote from Prof. Kumar:

"We are not afraid, not at all! If you live in an anxious environment, you will become more ill. When you are in an environment without fear, you will become healthy and happy!"
